a) The Transnet e-Tender Submission Portal can be accessed as follows:

Log on to the Transnet eTenders management platform website (<https://transnetetenders.azurewebsites.net>);

- Click on "SIGN IN/REGISTER" - to sign in if already registered;
- Toggle (click to switch) the "Log an Intent" button to submit a bid;
- Submit bid documents by uploading them into the system against each tender selected.

SECTION 1

1 Description of the works

1.1 Executive overview

The DRY BULK Terminal (DBT) in Richards Bay is a material handling facility where bulk cargo is imported and exported through a network of conveyor systems and bulk handling appliances.

The current system of hoppers has flat bars with holes which are equidistant from each other. These locating pins which are fixed on the hopper gates. The hopper gates are adjusted via the flat bar which locates on the fixed pins only when the conveyor belt is standing. This system is only adjusted when the plant is standing and is not easy to adjust when the hopper is full of cargo. This causes downtime and the conveyor cannot be adjusted correctly when it is standing. It is also very risky. It also creates inconsistent flow of cargo from the hopper – it causes bubbles while other sections of the conveyor belt have no cargo. This further causes a jerking effect on the conveyor belt & system and the drive system leading to early equipment failures.

In order to ensure perfect and efficient loading, the gates must be adjusted when the conveyor is running after the hopper is fully loaded from empty. The opening at the bottom of the hopper is very small, 280mm – 300mm wide, therefore, causes constant blockages when the front-end loaders are loading cargo onto the hopper, especially, when the cargo is wet. This result in front-end loaders banging the hoppers on top to try and unblock the hopper. This, in turn, causes the hoppers to be damaged and further causes further unnecessary expenditure

1.2 Employer's objectives

TPT's objective for this project is to modify hopper gates for K01, K03 and S05 to improve efficiencies, ensures continuous flow of cargo onto the conveyor belts, eliminates downtime as well as blockages and improves ergonomics. These hoppers are the first ones to have this kind of modification and, therefore, will be trialled out for a period of a month.

To ensure continuous operation of the Terminal's equipment, a project has been initiated to modify the hoppers to improve operational efficiency and ensures the continuous flow of cargo from the hopper onto the conveyor belts so that operations targets can be met, improve the life of machinery and the ergonomics. During the initial loading of the hopper, the gates are closed while the conveyor is standing. The gates are closed simultaneously using one adjustment. The conveyor is then started after the front-end loaders have loaded the hopper fully. The gates are then opened slightly to allow the cargo to be free flowing onto the conveyor until it reaches it's peak loading capacity and the flow is continuous throughout the entire conveyor belt.

1.3 Interpretation and terminology

The following abbreviations are used in this Works Information:

Abbreviation	Meaning given to the abbreviation
GMAW	Gas Metal Arc Welding
SMAW	Shielded Metal Arc Welding
SHERQ	Safety, Health, Environment, Risk and Quality

2 Engineering and the Contractor's design

2.1 Employer's design

No designs will be provided by the Employer.

2.2 Parts of the works which the Contractor is to design

2.2.1 The Contractor is to design the following parts of the works:

Provide engineering drawings for the modified hoppers. The drawings will be submitted to the *Project Manager* as part of project completion and handover. The ownership and Intellectual Property of the drawings will therefore be transferred to the *Employer*.

2.3 Review and Acceptance of Contractor Documentation

The *Contractor* submits documentation as the 'Works Information' requires to the *Project Manager* for review and acceptance.

3 Construction

3.1.1 The Contractor complies with the following [state relevant details of entry (and exit) permissions and restrictions for personnel at the Site] requirements of the Employer:

A permit will be arranged for access to the site before commencement of the works. An induction will be conducted in order for the Contractor to be fully conversant with the site rules.

3.2 Completion, testing, commissioning and correction of Defects

3.2.1 The work to be done by the Completion Date

On or before the Completion Date the *Contractor* shall have done everything required to Provide the Works including the work listed below which is to be done before the Completion Date and in any case before the dates stated. The Project Manager cannot certify Completion until all the work listed below has been done and is also free of Defects, which would have, in his opinion, prevented the Employer from using the works and Others from doing their work.

Item of work	To be completed by
Performance testing of the works in use as specified in this Works Information.	At completion.

3.3 Electrical & mechanical engineering works

Modify hoppers as per the scope below: K01 hoppers x4, K03 hoppers X4 and S05 hopper x5

- The Contractor is required to modify by cutting the opening of the hopper bin at the bottom from 300mm to 500mm.
- Remove existing hopper gate operating system and install 50mm screw made of 304 stainless steel and 50mm screw nut made of EN8 material.
- Machine and install gears to control the hopper gates to allow gates to open and close simultaneously by adjusting the gate screw.
- Strengthen and Replace bracing the hopper gates to prevent them from bending.
- The gears must be able to lock when the adjustment is complete to prevent the gates from opening and/ or closing when the plant is in operation.
- All welding procedures shall be as follows:
- Contractor's workshop welding procedure – GMAW
- Onsite welding procedure – SMAW (if there are welds to be done on site)

- The Contractor will be issued with TPT specifications to follow as per table below:

Transnet Port Terminals Standard Specifications	
Specification for structural steel work	EEAM-Q-006
Specification for corrosion protection	EEAM-Q-008
Quality management specification for supplier/construction	EEAM-Q-009

- Supplier shall make up new drawings for these modifications and handover the ownership and Intellectual Property drawings to TPT.
