position of the transgressors within the company hierarchy of the Tenderer/Service Provider/Contractor and the amount of the damage. The exclusion will be imposed for up to a maximum of 10 (ten) years. However, Transnet reserves the right to impose a longer period of exclusion, depending on the gravity of the misconduct.

If the Tenderer/Service Provider/Contractor can prove that it has restored the damage caused by it and has installed a suitable corruption prevention system, or taken other remedial measures as the circumstances of the case may require, Transnet may at its own discretion revoke the exclusion or suspend the imposed penalty.

TRANSNET'S LIST OF EXCLUDED TENDERERS (BLACKLIST)

The process of restriction is used to exclude a company/person from conducting future business with Transnet and other organs of state for a specified period. No Tender shall be awarded to a Tenderer whose name (or any of its members, directors, partners or trustees) appear on the Register of Tender Defaulters kept by National Treasury, or who have been placed on National Treasury's List of Restricted Suppliers. Transnet reserves the right to withdraw an award, or cancel a contract concluded with a Tenderer should it be established, at any time, that a tenderer has been restricted with National Treasury by another government institution.

All the stipulations on Transnet's restriction process as laid down in Transnet's Supply Chain Policy and Procurement Procedures Manual (CPM included) are included herein by way of reference. Below follows a condensed summary of this restriction procedure.

On completion of the restriction procedure, Transnet will submit the restricted entity's details (including the identity number of the individuals and registration number of the entity) to National Treasury for placement on National Treasury's Database of Restricted Suppliers for the specified period of exclusion. National Treasury will make the final decision on whether to restrict an entity from doing business with any organ of state for a period not exceeding 10 years and place the entity concerned on the Database of Restricted Suppliers published on its official website.

The decision to restrict is based on one of the grounds for restriction. The standard of proof to commence the restriction process is whether a "*prima facie*" (i.e. on the face of it) case has been established.

Depending on the seriousness of the misconduct and the strategic importance of the Goods/Services, in addition to restricting a company/person from future business, Transnet may decide to terminate some or all existing contracts with the company/person as well.

1. PURPOSE

1.1. This specification outlines the requirements for conducting a geotechnical investigation on

Klub Road at the Port of Nggura. The aim is to gather comprehensive information pertaining

to subsurface conditions, soil properties, and potential geotechnical hazards.

1.2. The purpose of the geotechnical investigation is to assess the subsurface conditions at

selected locations along the existing roadway alignment and to provide geotechnical

recommendations and considerations associated with the roadway rehabilitation.

1.3. The objective is to appoint a professional service provider to conduct a detailed geotechnical

investigation, with the aim of identifying the root cause of the localised settlement of the

road, and to propose a sustainable remedial measure for the Klub Road to ensure improved

ride quality and long-term durability.

2. BACKGROUND

2.1 The Port of Nggura started operations in October 2009 and features a crucial

infrastructure network. This network encompasses Klub Road, an asphalt road originating

from the port's main entrance and extending to the port control building. Since 2011, a

section of Klub Road has been experiencing persistent settlements, resulting in numerous

distress problems that severely impact its ride quality.

2.2 The road exhibits numerous settlement areas, necessitating a comprehensive

geotechnical investigation to identify root causes and propose an enduring solution.

2.3 Klub Road comprises of three distinct layers beneath the surface: a 150mm G3 base

course, 150mm G5 subbase, and 150mm G7 subgrade. The road surface itself is asphalt.

2.4 Klub Road is equipped with a comprehensive drainage system comprising of underground

pipelines, culverts, manholes, and v-drains. This system was designed to efficiently

handle rainwater runoff and prevent potential damage caused by water infiltration.

DESCRIPTION OF THE SERVICES: PROVISION OF GEOTECHNICAL INVESTIGATION SERVICES FOR

KLUB ROAD AT THE PORT OF NGQURA FOR A PERIOD OF TWO (2) MONTHS

2.5 Despite previous remedial efforts, the road has experienced recurring settlements,

particularly at selected locations along the existing roadway alignment.

3. SCOPE OF WORK

The scope of works includes drilling boreholes along the existing roadway alignment,

conducting laboratory analysis and testing of recovered representative soil samples,

undertaking geotechnical engineering analysis and preparation of a geotechnical report.

3.1. Material Sampling and Testing:

The contractor is expected to conduct a comprehensive geotechnical investigation by

obtaining material samples and performing the tests stipulated in the specification. The

works to be conducted includes:

Site visits to collect soil samples from the trail pits. The exact locations of the trial a)

pits will be selected and marked in the field by the project manager.

b) Perform in-situ tests, including insitu soil classification (MCCSSO), Dynamic cone

penetration test (DCP), hand soil auger, and standard Penetration Tests (SPT).

c) Conduct all the necessary laboratory tests on samples collected for different

engineering properties.

d) Record groundwater levels and perform aguifer tests to assess groundwater

conditions and potential impacts on construction.

Provide recommendations for mitigation measures based on the hazard e)

assessment.

f) Provide and estimate of the total cost of rehabilitation of the road.

Part C3: Scope of Work

4. CONDITION ASSESSMENT REPORTING AND RECOMMENDED SOLUTIONS

- 4.1. Findings summary: A comprehensive geotechnical report must be prepared, consolidating the outcomes of the study. The report will include detailed descriptions of subsurface conditions, soil properties and laboratory test results.
- 4.2. **Distress Location Visualization:** The report will utilize graph presentations to precisely indicate the locations of various distresses observed along Klub Road. This graphical representation will enhance clarity and facilitate a more accessible understanding of the road's condition.
- 4.3. **Engineering Recommendations:** The document will provide essential engineering recommendations and design parameters essential for the refurbishment of Klub Road.
- 4.4. Report Submission: To ensure accessibility and convenience, the geotechnical report and recommendations shall be submitted in both hardcopy and electronic formats. This submission will be directed to the Project Management team, ensuring efficient dissemination and utilization of the crucial findings and recommendations.

5. LOCATION OF THE SITE, SITE ACCESS
