C2.1 Pricing instructions: Option B

THE *CONDITIONS OF CONTRACT*

How the contract prices work and assesses it for progress payments

Clause 11 in NEC3 Engineering and Construction Contract, June 2005 (with amendments June 2006 and April 2013) (ECC) Option B states:

Identified 11

and defined

terms

11.2 (21) The Bill of Quantities is the *bill of quantities* as changed in accordance with this contract to accommodate implemented compensation events and for accepted quotations for acceleration.

(22) Defined Cost is the cost of the components in the Shorter Schedule of Cost Components whether work is subcontracted or not excluding the cost of preparing quotations for compensation events.

(28) The Price for Work Done to Date is the total of

- the quantity of the work which the *Contractor* has completed for each item in the Bill of Quantities multiplied by the rate and
- a proportion of each lump sum which is the proportion of the work covered by the item which the *Contractor* has completed.

Completed work is work without Defects which would either delay or be covered by immediately following work.

(31) The Prices are the lump sums and the amounts obtained by multiplying the rates by the quantities for the items in the Bill of Quantities.

This confirms that Option B is a re-measurement contract, and the bill comprises only items measured using quantities and rates or stated as lump sums. Value related items are not used. Time related items are items measured using rates where the rate is a unit of time.

CONSTRUCTION OF MANHOLES, INSTALLATION OF NEW WATER INLINE STRAINERS, ADDITIONAL WATER METERS, AND ISOLATION GATE VALVES AT THE PORT OF NGQURA FOR A ONCE-OFF PERIOD

Function of the Bill of Quantities

Clause 55.1 in Option B states, "Information in the Bill of Quantities is not Works Information or Site Information". This confirms that instructions for how to do work or how it is to be done are not included in the Bill, but in the Works Information. This is further confirmed by Clause 20.1 which states, "The *Contractor* Provides the Works in accordance with the Works Information". Hence the *Contractor* does **not** Provide the Works in accordance with the Bill of Quantities. The Bill of Quantities is only a pricing document.

Guidance before pricing and measuring.

Employers preparing tenders or contract documents, and tendering contractors are advised to consult the sections dealing with the bill of quantities in the NEC3 Engineering and Construction Contract (June 2005) Guidance Notes before preparing the *bill of quantities* or before entering rates and lump sums into the *bill*.

Historically bill of quantities-based contracts in South Africa have been influenced by the different approaches of the civil engineering and building sectors of the industry through their respective discipline based standard forms of contract and methods of measurement. This is particularly apparent in the approach to the Preliminary and General bill. On the other hand, because ECC caters for a number of disciplines in the same contract, including electrical works, a different approach not currently found in local methods of measurement to the Preliminary & General bill items may have been used.

The NEC approach to the P & G bill assumes use will be made of method related charges for Equipment applied to Providing the Works based on durations shown in the Accepted Programme, fixed charges for the use of Equipment that is required throughout the construction phase, time related charges for people working in a supervisory capacity for the period required, and lump sum charges for other facilities or services not directly related to performing work items typically included in other parts of the bill.

Prov sum ⁴	provisional sum
PC-sum	prime cost sum
R/only	Rate only
sum	Lump sum
t	ton (1000kg)
W/day	Workday

⁴ Provisional Sums should not be used unless absolutely unavoidable. Rather include specifications and associated bill items for the most likely scope of work, and then change later using the compensation event procedure if necessary. This is because tenderers cannot programme effectively for unknown scopes of work

General assumptions

Unless otherwise stated, items are measured net in accordance with the drawings, and no allowance has been made in the quantities for waste.

The Prices and rates stated for each item in the Bill of Quantities shall be treated as being fully inclusive of all work, risks, liabilities, obligations, overheads, profit and everything necessary as incurred or required by the *Contractor* in carrying out or providing that item.

Clause 63.13 in Option B provides that these rates and Prices may be used as a basis for assessment of compensation events instead of Defined Cost.

Where this contract requires detailed drawings, designs or other information to be provided, and no rates or prices are included in the *bill* specifically for such matters, then the *Contractor* is deemed to have allowed for all costs associated with such requirements within the tendered rates and Prices in the Bill of Quantities.

An item against which no Price is entered will be treated as covered by other Prices or rates in the *bill of quantities*. If a number of items are grouped together for pricing purposes, this will be treated as a single lump sum.

The quantities contained in the Bill of Quantities may not be final and do not necessarily represent the actual amount of work to be done. The quantities of work assessed and certified for payment by the *Project Manager* at each assessment date will be used for determining payments due and not the quantities given in the Bill of Quantities.

The short descriptions of the items of payment given in the *bill of quantities* are only for the purposes of identifying the items. More detail regarding the extent of the work entailed under each item is provided in the Works Information.

Departures from the *method of measurement*

None

Amplification of or assumptions about measurement items

For the avoidance of doubt the following is provided to assist in the interpretation of descriptions given in the *method of measurement*. In the event of any ambiguity or inconsistency between the statements in the *method of measurement* and this section, the interpretation given in this section shall be used.

PART C4: SITE INFORMATION

Note:

The Contractor is cautioned that the information contained in the Site Information section (Part C4) is limited and is by no means to be taken as conclusive. It is merely to give the Contractor an indication of the site and typical conditions that can be expected in the area. The Contractor is to take note of the source and location of information used in the Site Information Section (Part C4) and makes their own conclusions as to what conditions can be expected in and around the site.

Description of the Site and its surroundings

General description

The Port of Ngqura is located 25km outside of Port Elizabeth in the Easter Cape and consist of a container terminal with 4 berths, a dry bulk terminal with 2 berths and a liquid terminal with 1 berth. The N2 bypasses the port to the north.

The Port is bounded by the Coega Special Economic Zone with one main access road into the Port leading to various buildings, owned and operated by TNPA or terminal operators.

CONSTRUCTION OF MANHOLES, INSTALLATION OF NEW WATER INLINE STRAINERS, ADDITIONAL WATER METERS, AND ISOLATION GATE VALVES AT THE PORT OF NGQURA FOR A ONCE-OFF PERIOD

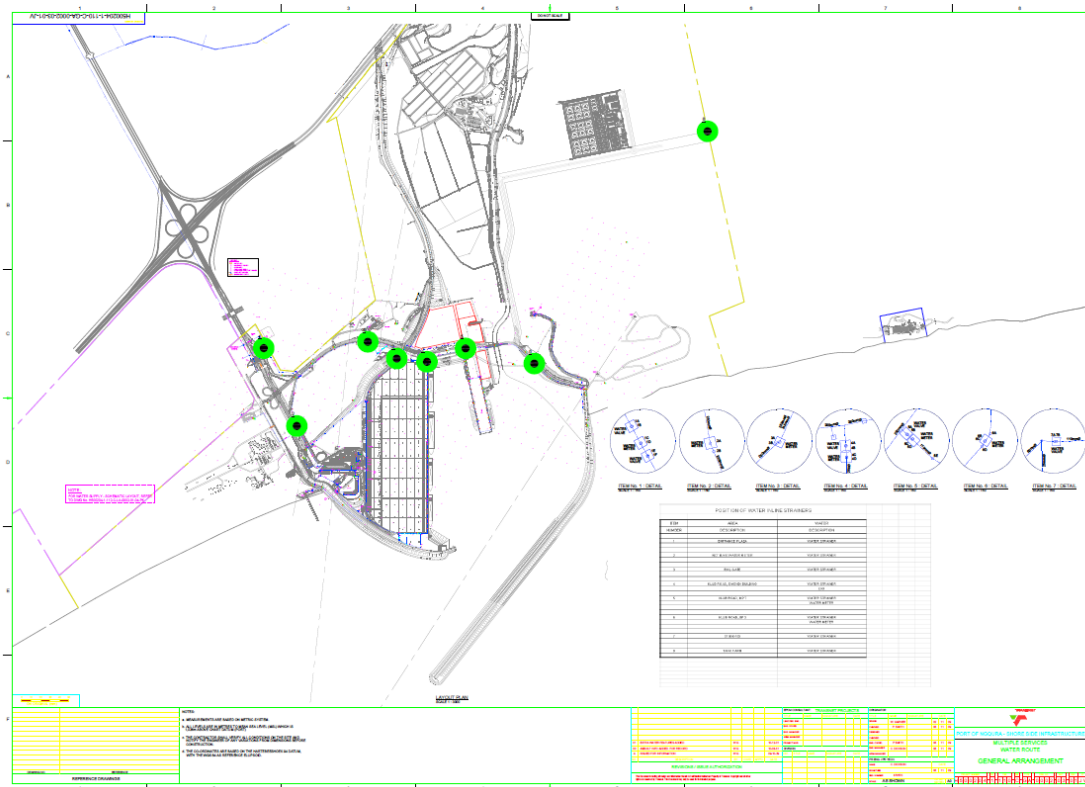

Figure 2: Location of Berth and Storage Yards

The water inside the Port perimeter is diverted to various users within the Port through the Port's internal water network. The existing water network has basic complementary equipment such as gate valves, gaskets, pumps, water meters, etc.

No water inline strainers were installed to protect the meters from solid particles and debris which may enter the water network from time to time. The Port has experienced damages to meters in the past with all main meters having had to be replaced in 2017, upon which rocks and stones were found lodged in some meters that were non-functional. Sometimes the solid particles would result to pipe leaks, which would affect the water supply within the Port. The installation of these strainers is very crucial since there are a lot of large particles such as rocks entering the water network.

These strainers will need to be placed at strategic locations (indicated with green dots on Figure 2 above) within the existing water reticulation. Additional manholes will need to be constructed to allow ease of access to these strainers. The installation of these strainers will help to protect downstream and upstream equipment such as water meters in the water network. An additional gate valves and water meters will also be installed as part of this project to improve accuracy regarding water monitoring and recovery.

Prospective contractors shall attend the site inspection and acquaint themselves with the nature of the *Works*, the condition under which the work is to be performed, and the means of access to site, any limitations or other authorities and in general will all matters that may influence or affect the contractor.

Access to the site can be gained via the N2, onto Neptune Road, past the Port Entrance Plaza, straight into the Ngqura Container Terminal.
